

## Blast Resistant Towers and Guardhouses

Tower sections are provided in ten-foot increments and constructed from hot-dipped galvanized structural steel.

Combined with a ballistic and blast rated guardhouse this setup provides both safety and enhanced visibility.

Other options include ballistic rated weapon stands and armored shields.

Towers are built to order with limitless construction and assembly options.

The tower can be pre-assembled or provided as structural components, ready for field assembly.

Precast foundation options eliminate the need for excavation and concrete work on site.

- \* Blast rated to 25psi
- \* Hot-dipped galvanized steel for durability and weather resistance.
- \* Available in ten-foot sections.
